Summary

AI engineer with 10+ years building AI products serving millions of users.

Experience

- 2023 – Present **Founder, Shola Ventures**
- Led cross-functional team of ten to build an investment platform for institutional asset managers from concept through production deployment.
 - Trained AI models to predict portfolio returns and classify opportunities from proprietary financial data; Designed domain ontology mapping financial concepts to specific material assets, enabling AI platform to deliver actionable recommendations.
 - Developed iOS application with AI-powered content interpretation using a custom domain-specific ontology.
- 2020 – 2023 **Staff Software Engineer, IBM (Apprentice AI)**
- Designed regionally adaptive NLP features to handle linguistic variations and accents across global markets.
 - Redesigned ETL data pipeline to optimize platform performance, reducing processing time by 30% and enabling platform expansion.
 - Built ML hardware consumption analysis tool that identified \$2M in cost savings and 15% reduction in ops spending.
- 2018 – 2020 **Senior Software Engineer, IBM**
- Led team of 6 engineers building and deploying product features, incorporating stakeholder feedback to optimize user experience.
 - Directed feature development across engineering, product, ML, and UX teams, ensuring national scalability to our corporate partners.
- 2015 – 2017 **Software Engineer, Walker & Company, *Acquired***
- Built data infrastructure for growth experiments that drove 15% increase in e-commerce revenue.
 - Mentored junior engineer through their first major project; recognized for collaborative leadership.
- 2014 – 2015 **Software Engineer II, Intuit, *Promoted from Software Engineer I***
- Designed and scaled Financial Insights microservice to support 5M+ concurrent users across multiple product lines.
 - Improved Search API performance from 4 minutes to 10 milliseconds, enabling real-time functionality for millions of users.

Research

- 2023 – 2023 **AI Safety Camp, AI Researcher**
- Contributed to a behavioral annotation framework that recorded a range of cultural and situational contexts, improving contextualization for AI alignment research
- 2020 – 2021 **OpenAI - Research Scholar, *Completed during full-time sabbatical from IBM***
- Ran scaling experiments on transformer variants (Reformer, Transformer XL, BERT) to identify cost-efficient configurations and reduce inference costs for production applications.

Education

- 2009 – 2014 **Stanford University, School of Humanities & Sciences, Stanford, CA**
B.S. Science, Technology & Society, Computer Science Minor
